DETAIL ACTION

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as following:

In the specification, page 1, before line 1, insert --CROSS-REFERENCE TO RELATED APPLICATIONS--;

make a new line by inserting -- This application claims priority to International Application No. PCT/IB03/00865 published in the German language on March 10, 2003, which claims the benefit of priority to German Application No. 102 11 001.8, which was filed in German language on March 13, 2002.--;

insert --BACKGROUND OF THE INVENTION-- in a next line; and
before line 4, insert --OBJECTS AND SUMMARY OF THE INVENTION--.

page 5, before line 17, insert --BRIEF DESCRIPTION OF THE DRAWINGS--; and

before line 25, insert --DESCRIPTION OF THE PREFERRED EMBODIMENTS--.

In claim, line 1 of claims 2-10, delete "An" and insert --The--; and

Claim 11, line 8 and line 16, insert --integral-- before "fraction".

Claim 12, line 1, delete "A" and insert --The--.

The above noted amendment has been added in order to provide a clarification in the specification and claim language as well.

Reasons For Allowance

1. Claims 1-12 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art of record fails to disclose an electronic circuit and method for tuning the frequency of a high-pressure lamp in a safety level by comprising a converter, an oscillator for driving the converter, the fundamental frequency of the output voltage of the oscillator lying at least in proximity to an integral fraction of the resonance frequency of the resonant circuit, and a feedback from the resonant circuit to the oscillator, whereby the fundamental frequency of the output voltage of the oscillator is so tuned that the resulting frequency of the output voltage of the oscillator corresponds substantially exactly to the integral fraction of the resonance frequency in proximity to which the fundamental frequency of the output voltage of the oscillator lies as required in claims 1 and 11.
3. The remaining dependent claims are allowable for at least above reason.
4. The prior art made of record and not relied upon is considered pertinent to applicants' disclosure. Waki et al. (US Pat. 5,233,273) discloses discharge lamp starting circuit. Schlecht et al. (US Pat. 4,788,634). None of recorded prior arts stands alone or combination with others discloses all limitation required in claim invention.
